

INSTALLING SEAVIEW 3.4

System Requirements

SeaView V3.4 is compatible with Windows XP, Vista and Windows 7. Windows 95 and 98 are no longer supported.

SeaView V3.4 will overwrite previously installed versions of SeaView V3.2 & 3.3. SeaView V3.4 will "uninstall" V3.0 and perform a fresh installation of V3.4. All Images or data files downloaded via prior versions of SeaView will remain on your computer.

Installation Instructions

Insert the installation CD into the CDROM or DVD drive on your PC. If auto-run is enabled, the installation program will begin to run shortly. A small install screen should appear automatically. If no install screen appears, left click the Windows "Start" menu, select "Run..." and enter "D:\SV3_Installer.exe" in the white entry field to the right of "Open." The letter of your CD-ROM or DVD drive may be different depending on your PC's configuration. Continue to follow along with the setup program using the defaults whenever possible.

Depending on the configuration of your system, several Java and helper applications may be installed along with SeaView. Be patient and continue to follow instructions that appear on the screen. There will be pauses between phases of the installation process. These pauses may be long depending on your computer. DO NOT CANCEL THE INSTALLATION PROCESS DURING THESE PAUSES.

When the upgrade is complete, click the "Finish" button in the SeaView installation dialog window and view the "ReadMe" file which contains important information pertaining to Windows Vista and Windows 7 users.

Unlocking Your New *SeaView* Software

Once SeaView V3.4 installation is complete, only the "demo version" will be active until your software is "unlocked." All fresh installs, re-installs or installations on secondary computers require new "unlock codes" specific to the unique 16-digit registration number generated during the installation process on each computer.

If you intend to install SeaView on more than one device, you may want to complete installation on both devices up to the point of registration code generation in order to obtain each required unlock code during a single phone call or email.

Activating *SeaView*

Double-left-mouse-click the "SeaViewV3" icon on your desktop or select the Windows "Start" menu and select "Programs > SeaViewV3.4 > SeaViewV3" to start the SeaView application.

To "unlock" SeaView for use other than "demo mode," click on the "Register SeaView" button when the welcome window appears. At this point, you will then need to contact the Ocean Imaging office either by phone or email with the 16-digit registration code generated. We will set up your account and provide you with an "unlock" code(s) and user-name(s) specific to SeaView's installation on each computer.

Once the unlock code is entered, you should see a "SeaView Successfully Unlocked!" message. SeaView is now fully functional. If you are a current SeaView subscriber, you will have the ability to download new data from Ocean Imaging's servers.

NEED HELP?

If you need assistance installing SeaView, setting up your phone to connect to the Internet, learning about all of the different SeaView products available, or simply have a question or two, please contact Mark Hess at the telephone number or email address below.

Paula Klein is also available to unlock your software and get your account started or re-activated.
